

Cable Ducting Solutions for your data center

euroclust launches Cable Path, a system for cable ducting in data centers or distribution offices. With these cable conduits, you can easily build up a cable route between racks, splicing cabinets, termination equipment and active component frames. Thanks to its modular design, you can enjoy a maximum of flexibility as Cable Path can be adopted to all kinds of architectural conditions. It is possible to install Cable Path above the racks & equipment as well as below the floor.

With Cable Path, you can protect your fiber optic cables against any kind of mechanical influence in order to avoid downtimes on your data transmission which may cause a loss of revenue as well as contractual penalties. Cable Path is fully compatible with cable duct systems of other brands and is available in 160mm wide and 300mm wide versions. The complete system is made of top quality materials in order to ensure a top performance throughout its service life. All plastic elements are made of PVC/ABS and with a 10 year warranty on UV stability.
